

Solo-Git v1.0 Installation Guide

Solo-Git is a Git workflow manager with built-in AI assistance. It consists of two components:

1. **Solo-Git CLI** - Python-based command-line tool
 2. **Heaven GUI** - Desktop application (optional)
-

Quick Install (Recommended)

Windows

1. Download Heaven Installer

- Download `heaven_1.0.0_x64-setup.exe` from releases
- Run the installer
- Launch Heaven from Start Menu

2. Install Solo-Git CLI

```
```powershell
Install Python 3.11+ if not installed
python -version # Should be 3.11+
```

```
Install Solo-Git
```

```
pip install sologit
```

```
Verify installation
```

```
sologit -version
```

```
```
```

1. Configure API Keys

```
```powershell
Initialize configuration
sologit config init

Set Abacus.AI API key (primary)
sologit config set abacus.api_key YOUR_ABACUS_API_KEY

Optional: Set fallback providers
sologit config set openai_api_key YOUR_OPENAI_KEY
sologit config set anthropic_api_key YOUR_ANTHROPIC_KEY
```
```

Linux (Debian/Ubuntu)

1. Download Heaven Installer

```
```bash
Option 1: DEB package
sudo dpkg -i heaven_1.0.0_amd64.deb
sudo apt-get install -f # Fix dependencies

Option 2: ApplImage (no installation)
chmod +x heaven_1.0.0_amd64.ApplImage
```

```
./heaven_1.0.0_amd64.ApplImage
```
```

1. Install Solo-Git CLI

```
```bash
Install Python 3.11+ if not installed
python3 --version # Should be 3.11+

Install Solo-Git
pip3 install sologit

Verify installation
sologit --version
```
```

1. Configure API Keys

```
```bash
Initialize configuration
sologit config init

Set Abacus.AI API key (primary)
sologit config set abacus.api_key YOUR_ABACUS_API_KEY

Optional: Set fallback providers
sologit config set openai_api_key YOUR_OPENAI_KEY
sologit config set anthropic_api_key YOUR_ANTHROPIC_KEY
```
```

Detailed Installation

Prerequisites

All Platforms

- **Python 3.11+** - Required for Solo-Git CLI
- **Git 2.30+** - Required for repository operations
- **API Key** - Abacus.AI account (get from <https://abacus.ai>)

Optional

- **OpenAI API Key** - Fallback provider
- **Anthropic API Key** - Fallback provider

Installing Solo-Git CLI

From PyPI (Recommended)

```
pip install sologit
```

From Source

```
git clone https://github.com/ssdajoker/Solo-Git.git
cd Solo-Git
pip install -e .
```

Verify Installation

```
sologit --version
# Output: sologit version 1.0.0

sologit --help
# Shows all available commands
```

Installing Heaven GUI

Windows

Option 1: MSI Installer (Enterprise)

```
# Download heaven_1.0.0_x64_en-US.msi
msiexec /i heaven_1.0.0_x64_en-US.msi

# Silent install
msiexec /i heaven_1.0.0_x64_en-US.msi /quiet
```

Option 2: NSIS Installer (Standard)

- Download `heaven_1.0.0_x64-setup.exe`
- Double-click and follow wizard
- Launch from Start Menu

Linux

Option 1: DEB Package (Debian/Ubuntu)

```
# Install
sudo dpkg -i heaven_1.0.0_amd64.deb

# Fix dependencies if needed
sudo apt-get install -f

# Launch
heaven-gui
```

Option 2: AppImage (Universal)

```
# Make executable
chmod +x heaven_1.0.0_amd64.AppImage

# Run
./heaven_1.0.0_amd64.AppImage

# Optional: Add to system
./heaven_1.0.0_amd64.AppImage --appimage-integrate
```

Configuration

Initial Setup

1. Initialize Configuration

```
bash
sologit config init
```

This creates `~/.sologit/config.yaml` (Linux) or `%USERPROFILE%\sologit\config.yaml` (Windows)

1. Set AI Provider Keys

Abacus.AI (Primary Provider)

```
bash
sologit config set abacus.api_key YOUR_KEY
sologit config set abacus.deployment_id YOUR_DEPLOYMENT_ID
sologit config set abacus.deployment_token YOUR_TOKEN
```

OpenAI (Fallback)

```
bash
sologit config set openai_api_key YOUR_KEY
```

Anthropic (Fallback)

```
bash
sologit config set anthropic_api_key YOUR_KEY
```

1. Configure Budget Limits (Optional)

```
```bash
Set cost limits
sologit config set budget.daily_usd 10.00
sologit config set budget.monthly_usd 100.00

Enable alerts
sologit config set budget.alert_threshold_pct 80
```
```

1. Test Configuration

```
bash
sologit config test
# Should show: ✓ Configuration valid
#              ✓ Abacus.AI connection: OK
#              ✓ OpenAI connection: OK (if configured)
```

Configuration File Structure

```
# ~/.sologit/config.yaml

# AI Providers
abacus:
  api_key: "your-abacus-api-key"
  endpoint: "https://api.abacus.ai/api/v0"
  deployment_id: "your-deployment-id"
  deployment_token: "your-deployment-token"

openai_api_key: "your-openai-key" # Optional
anthropic_api_key: "your-anthropic-key" # Optional

# Budget Limits
budget:
  daily_usd: 10.0
  monthly_usd: 100.0
  alert_threshold_pct: 80
  enabled: true

# Test Execution
test_framework: pytest # or unittest, jest, etc.
test_timeout_seconds: 300
parallel_tests: true
max_test_workers: 4

# Workflow Settings
auto_merge_enabled: false
require_passing_tests: true
min_test_coverage: 80
```

Getting Started

1. Create Your First Repository

```
# Create a new project
mkdir my-project
cd my-project

# Initialize Solo-Git
sologit init

# This creates:
# - .git/ (Git repository)
# - .sologit/ (Solo-Git state)
# - .sologit/config.yaml (Project config)
```

2. Create a Workpad

```
# Create a new feature workpad
sologit workpad create feature-login "Add user login"

# Solo-Git automatically:
# - Creates .sologit/workpads/feature-login/
# - Initializes workpad metadata
# - Switches Git working tree
```

3. Make Changes

```
# Edit files in your editor
echo "def login(): pass" > auth.py

# Check status
sologit status
```

4. Generate AI Commit Message

```
# Let AI write your commit message
sologit commit-msg -w feature-login

# AI analyzes your changes and suggests:
# "feat: Implement user login authentication"
#
# Edit if needed, then press save

# Commit is created automatically
```

5. Launch Heaven GUI

```
# Launch from CLI
sologit heaven

# Or launch Heaven app directly from Start Menu/Applications
```

In Heaven GUI:

- See commit graph visualization
- Browse file changes with Monaco editor
- View test results in real-time
- Use AI chat for code assistance
- Manage workpads visually

6. Promote to Main

```
# When feature is complete, promote to main branch
sologit workpad promote feature-login

# Solo-Git:
# - Runs tests
# - Checks promotion rules
# - Fast-forwards main branch
# - Updates state
```

Verification

CLI Verification

```
# Check version
sologit --version

# Check configuration
sologit config show

# Test AI connection
sologit config test

# Get help
sologit --help
sologit workpad --help
```

GUI Verification

1. Launch Heaven
2. Check that main window appears
3. Try opening Settings (Cmd/Ctrl+,)
4. Verify API keys are detected
5. Test file browser panel
6. Test command palette (Cmd/Ctrl+K)

Troubleshooting

CLI Issues

Command not found: sologit

```
# Ensure pip install location is in PATH
python -m pip show sologit
# Note the Location, ensure it's in PATH

# Or run directly
python -m sologit --version
```

Import Error: No module named 'click'

```
# Reinstall with dependencies
pip install --force-reinstall sologit
```

API Connection Failed

```
# Check API key
sologit config show | grep api_key

# Test connection
curl -H "apiKey: YOUR_KEY" https://api.abacus.ai/api/v0/listApiKeys
```

GUI Issues**Heaven won't launch (Windows)**

- Install WebView2 Runtime: <https://developer.microsoft.com/microsoft-edge/webview2/>

Heaven won't launch (Linux)

```
# Install WebKit2GTK
sudo apt install libwebkit2gtk-4.0-37

# Check dependencies
ldd /usr/bin/heaven-gui
```

Configuration not detected

- Ensure `~/.sologit/config.yaml` exists
- Check file permissions: `chmod 600 ~/.sologit/config.yaml`

Uninstallation

Remove Solo-Git CLI

```
pip uninstall sologit

# Remove configuration (optional)
rm -rf ~/.sologit
```

Remove Heaven GUI**Windows**

- Control Panel → Programs → Uninstall Heaven
- Or: `msiexec /x {PRODUCT_CODE}`

Linux

```
# DEB package
sudo apt remove heaven-gui

# AppImage
rm heaven_1.0.0_amd64.AppImage
```

Next Steps

- Read [QUICKSTART.md](#) (QUICKSTART.md) for detailed usage
- See [FEATURES.md](#) (FEATURES.md) for v1.0 feature overview
- Check [docs/](#) (docs/) for API documentation
- Visit <https://github.com/ssdajoker/Solo-Git> for updates
