

Workflow File Restoration Guide

What Was Done

The `phase-2-test-infrastructure` branch was successfully pushed to GitHub on **November 4, 2025** after temporarily removing the `.github/workflows/test.yml` file that was causing permission issues.

Summary of Actions

1. **Identified the Problem:** The workflow file `.github/workflows/test.yml` was blocking the push because the GitHub App lacks `workflows` permission.
 2. **Temporary Removal:** The workflow file was removed in commit `a593c8f920d62ef994c21c9467-faa9b171bc9afe` with the message:
TEMP: Remove `.github/workflows/test.yml` for push
 3. **Successful Push:** The branch was pushed to GitHub without the workflow file.
 4. **Branch Status:** The branch is now available at:
 - Remote: `origin/phase-2-test-infrastructure`
 - PR Creation Link: <https://github.com/ssdajoker/Solo-Git/pull/new/phase-2-test-infrastructure>
-

Original Workflow Commit

The workflow file was originally added in:

- **Commit Hash:** `87c78c9`
 - **Commit Message:** "ci: Add comprehensive test workflow for GitHub Actions"
 - **File:** `.github/workflows/test.yml` (404 lines)
-

How to Restore the Workflow Changes

You have **three options** to restore the workflow file in a separate PR with proper permissions:

Option 1: Revert the Temporary Removal Commit (Recommended)

This is the simplest approach - just undo the removal commit:

```
# Create a new branch from phase-2-test-infrastructure
git checkout phase-2-test-infrastructure
git pull origin phase-2-test-infrastructure
git checkout -b restore-workflow-file

# Revert the temporary removal commit
git revert a593c8f920d62ef994c21c9467faa9b171bc9afe

# Push the new branch
git push origin restore-workflow-file

# Create a PR from restore-workflow-file to main
# Make sure to request workflow permissions before merging
```

Option 2: Cherry-pick the Original Workflow Commit

This approach brings back the exact original commit:

```
# Create a new branch from main (or the target branch)
git checkout main
git pull origin main
git checkout -b add-workflow-file

# Cherry-pick the original workflow commit
git cherry-pick 87c78c9

# Push the new branch
git push origin add-workflow-file

# Create a PR from add-workflow-file to main
# Make sure to request workflow permissions before merging
```

Option 3: Manually Re-add the Workflow File

If you want to review or modify the workflow before re-adding:

```
# Create a new branch from main
git checkout main
git pull origin main
git checkout -b add-workflow-file

# Show the original workflow file content
git show 87c78c9:.github/workflows/test.yml > .github/workflows/test.yml

# Review and edit if needed
# Then commit
git add .github/workflows/test.yml
git commit -m "ci: Add comprehensive test workflow for GitHub Actions"

# Push the new branch
git push origin add-workflow-file

# Create a PR from add-workflow-file to main
```

Important Notes

GitHub App Permissions

⚠️ **Before merging any PR that includes workflow files**, ensure that:

1. The GitHub App has the `workflows` permission enabled
2. Or, use a personal access token with `workflow` scope for the push
3. Or, have a repository admin review and merge the PR

You can manage GitHub App permissions here:

- [GitHub App Installations](https://github.com/apps/abacusai/installations/select_target) (https://github.com/apps/abacusai/installations/select_target)

Commit References

- **Temporary Removal Commit:** `a593c8f920d62ef994c21c9467faa9b171bc9afe`
- **Original Workflow Commit:** `87c78c9`
- **Branch:** `phase-2-test-infrastructure`

Verification

After restoring the workflow file, verify it's correct:

```
# Check the file exists
ls -la .github/workflows/test.yml

# View the file content
cat .github/workflows/test.yml

# Check the commit history
git log --oneline -- .github/workflows/test.yml
```

Next Steps

1. ✅ **Branch Pushed:** `phase-2-test-infrastructure` is now on GitHub
 2. 📝 **Create Main PR:** Create a PR from `phase-2-test-infrastructure` to `main` (without workflow file)
 3. ↺ **Restore Workflow:** Use one of the options above to restore the workflow file in a separate PR
 4. 🔑 **Permissions:** Ensure proper permissions before merging the workflow PR
